

My house is made of squares,  
rectangles, and triangles.

Have your child color all the shapes you see below. In the large rectangle piece at the bottom, have your child color the entire thing the same color. The windows and door in this piece are only guides for where to put the puzzle pieces. Cut out these shapes with scissors. If you are working with a smaller child (under 3 years old, possibly 4 depending on their scissor skills) you may want to cut the shapes out yourself and just have them place the pieces on the house above.

Only cut out the large rectangle below for the house. Do not cut out the doors and windows that are inside the shape. These are guides for the puzzle pieces only.

---

### Model House

Optional: Have your child draw horizontal and vertical lines in the windows to practice drawing straight lines and cross shapes!
